Weathered Wood Color Family

The Weathered Wood color is a family of similar colors in our industry that may be called by other color names such as Majestic Shake or Driftwood.

All Weathered Wood, Majestic Shake and Driftwood shingle colors are earth tone color blends that are similar in color appearance. Shingle manufactures use a variety of different names to identify basically the same shingle color. There are many factors that affect the color of the shingle: granule size, granule quarry location, manufacturing run rates, sun exposure, manufacturing process, shingle features, etc.

The Weathered Wood color family is the most popular shingle color sold in the United States. All shingle manufactures have a version of the Weathered Wood color designed to be similar in appearance.
